

Tilt & Turn window operation

Your tilt & turn window is a multi-locking, high quality, highly secure window

The window is taken to the tilt position for ventilation
by moving the handle from the closed position, 180 degrees to the top position
Now pull the window gently towards you

The window is taken to the turn position
By moving the handle from the closed position, 90 degrees to the centre position
Now pull the window gently towards you

N.B. The window cannot be moved directly from tilt to turn or vice versa
This must always be done from the closed position
